(54) Title: BUSINESS APPLICATION GENERATION SYSTEM

(57) Abstract: A business application generation system for automatically generating a business software application, comprising: a central processing unit; a repository containing a set of meta data; a generation tool; input/output means for treating said meta data and for invoking said generation tool; said set of meta data containing structured business process application information, and said generation tool retrieving data from said repository and, on the basis of said retrieved repository data, generating a customized business process application.
